

Elevating Fragrance: A Sustainable Solution to Body Odor, Hygiene and Freshness

We are creating this fragrance patch to tackle body odor for every situation throughout the day while ensuring freshness in all conditions, addressing the challenges of convenience and environmental sustainability in a single solution.

Men's Grooming Market Growth

\$54,000,000,000

(Euromonitor)
Men increasingly adopt skincare and hygiene routines, showing openness to innovative and sustainable solutions

Masculinity in Crisis Report

(Synthesis)
Men prioritize products that help them appear confident, clean, and modern.
Portability and eco-friendliness resonate strongly with younger, urban male demographics.

Men's fragrances are **GLOBALLY VALUED** at

18 Billion USD

with projected **GROWTH** driven by regions like the **MIDDLE EAST**

Problem Identification

1. Body Odor Challenges

Sweating in extreme heat, like that of GCC countries, where temperatures frequently exceed 50°C, intensifies body odor and overwhelms traditional fragrances.

45%
GCC residents

say traditional products **lose effectiveness** after excessive sweating

48%
GCC residents

report that their deodorants **fail to last** throughout the day in hot climates

Current deodorants and fragrances are not designed to withstand high temperatures and sweat levels, creating a demand for adaptive, long-lasting solutions tailored to these conditions.

2. Hygiene Issues Arising from Prolonged Sweating

62%
GCC residents

reported feeling self-conscious about body odor in high-stress situations (Gulf Grooming Survey, 2023)

50%
Individuals

in tropical and humid climates experience skin issues caused by sweat, including rashes and fungal infections.

Most deodorants and sprays primarily mask odors instead of addressing underlying hygiene issues, such as antibacterial and antifungal care, creating a significant market gap.

3. Inconvenience

Traditional perfumes, attar, and antiperspirants are either **bulky, inconvenient, or require frequent reapplication, especially in hot temperatures.**

Consumers increasingly seek compact, innovative solutions that cater to their dynamic lifestyles.

4. Lack of Sustainable Solutions

Synthetic ingredients and excessive plastic packaging in the fragrance industry contribute to pollution, waste, and potential skin irritation

Traditional deodorants contribute to:

- 5% of total global aerosol emissions.
- The increasing carbon footprint of beauty and grooming products

Consumers are turning to eco-friendly, skin-safe alternatives with sustainable packaging for a healthier and greener choice.

ELEVATE YOUR SELF-CARE ROUTINE WITH OUR REVOLUTIONARY SCENTED PATCHES, TAILORED FOR THE MODERN MAN!

Introducing our **advanced biotech dissolvable scented patches** designed specifically for the dynamicity of modern, active lifestyles. Crafted with a **biodegradable, skin-safe adhesive and a heat and sweat-sensitive polymer matrix**.

The patch releases its primary fragrance upon application. When body heat and sweat levels rise, the secondary fragrance comes into action as the patch gradually dissolves into the skin, delivering a seamless, scented experience with anti-fungal and anti-bacterial care

These portable, eco-friendly patches redefine freshness and hygiene with every moment!

Cutting-edge Biotechnology

PVA polymer matrix

Good for skin

On top of that, it also incorporates **natural antifungal agents** like tea tree oil and clotrimazole derivatives to soothe skin irritations and combat fungal growth. The **PVA-based formula** ensures a safe, residue-free dissolution, while advanced microencapsulation technology provides controlled fragrance release that adapts to your activity level.

Accompanied by a **sleek, reusable dispenser** that stores patches and refillable fragrances, you have a portable, sustainable and **technologically advanced** grooming solution that keeps you fresh, active, and confident all day long.

Personalization

AI customized scent blends and intensity levels for tailored experiences

Smart Tracking

Track patch usage & fragrance levels. Refill alerts ensure you never run out

Health and Skin Insights

Monitor sweat levels, body heat, vitals and skin conditions and receive tips for optimal use

Environmental Metrics

Get insights into your carbon footprint and sustainability achievements

Lifestyle Integration

Sync with fitness apps to match scent profiles to your activities.

Social and Sharing Features

Share custom scent blends with your digital community

Purchase and Support

Multi-User Profiles

Create and save personalized profiles for multiple users under one roof

PLUMEO

A FRAGRANCE THAT ADAPTS TO YOUR DAY!

1. PVA BASED BACKING SURFACE

2. ENCAPSULATED MOLECULES FOR CONTROLLED RELEASE

3. ADHESIVE LAYER

4. FAST-RELEASING FRAGRANCE MOLECULES

5. RELEASE LINER

Use microcapsules with hydrophilic shells (gelatin or gum arabic). These rupture or dissolve in the presence of sweat

Incorporate phase-change materials (PCMs) that activate with body heat to release fragrance

A breathable and sweat-proof adhesive layer, ensuring the patch remains intact during initial use

Volatile Oils: Include essential oils or alcohol-based fragrances that evaporate at room temperature

Exploded Axonometric Plumeo's layers

11.5 CM

4 CM

3 CM

Materials and Methods

Heat- or Moisture-Activated Polymers

Hydroxypropyl Methylcellulose (HPMC): Dissolves upon moisture exposure.

Polyvinyl Alcohol (PVA)

Reacts to sweat and releases embedded scents.

Fragrance Boosters: Include materials like citrus esters or aldehydes that amplify scent intensity upon exposure to moisture.

Antifungal Agents: Integrate antifungal agents like tea tree oil or clotrimazole within the inner layer to ensure skin benefits as the patch dissolves.

Refillable Kit
(Patches + Fragrances + Emulsifiers)

Tactile LED Screen + Button
to initiate Patch release + Track (Kit usage + Scent Info + Battery)

Materiality
Matte Finish metal edges + Cork casing

Charging slot

New Patch Dispensed

Dispenser

15 CM

Refillable Kit

Scent Oils (4 cylinders)

Alcohol Emulsifiers (2+2 cylinders)

*** Pricing**

Dispenser + 75 patches + Filled fragrance (10mL): **\$110**

Refillable Fragrance Oils: **\$20** for 10 mL (variety of scents available)

Patch Pack: 70 patches for **\$40**

WHY PLUMEO?

Consumer Demand

Consumers are increasingly prioritizing sustainability and convenience, especially in urban markets.

Scalability

Globally relevant product with potential for regional adaptations (e.g., oud scents for GCC markets, tropical scents for Southeast Asia)

Men's grooming market revenues projected to reach

\$81,000,000,000

by 2030

Addressing Pain Points

Offers a reliable solution to body odor, skin health, and environmental concerns—all unmet by traditional products.

Alignment with L'Oréal Values

Promotes innovation, inclusivity, and sustainability, core pillars of the L'Oréal brand.

Market Differentiation

Combines fragrance, hygiene, and eco-friendliness in a unique, dissolvable patch format, setting it apart from deodorants and sprays.

WE HAVE THE SOLUTION!

with our solution-oriented and innovative patch!

BODY ODOR & SKIN HEALTH?

Our patches enhance fragrance when exposed to sweat or high temperatures, ensuring long-lasting freshness even in extreme heat, such as that experienced in the GCC.

HYGIENE CONCERNS FROM EXCESSIVE SWEATING?

Our patches enhance fragrance when exposed to sweat or high temperatures, ensuring long-lasting freshness even in extreme heat, such as that experienced in the GCC.

INADEQUATE CONVENIENT & SUSTAINABLE SOLUTIONS?

The product features compact, biodegradable patches paired with a reusable dispenser, offering a portable, eco-friendly alternative that eliminates the need for single-use plastics or aerosol products.

AD-HOC PERSONA SCENARIOS

1.

Person A, an avid gym-goer, feels self-conscious about sweat odor. PLUMEO is the ideal solution, as its fragrance intensifies with sweat and body temperature, effectively masking odors and keeping them fresh for longer periods.

2.

Person B, a fashion enthusiast, frequently changes outfits but dislikes reapplying fragrance. Our skin-applied patch provides a long-lasting scent, enabling easy outfit changes without reapplication.

3.

Person C, an office worker, feels self-conscious about odor from his underarms and feet. PLUMEO is for him. It can be applied anywhere on the body, effectively masking odor while antifungal and antibacterial agents in it keep the skin fresh and healthy.

4.

Person D, a travel enthusiast, prefers to pack light and avoid carrying excess luggage. Our product is the perfect solution, as it is compact, budget-friendly, and easy to carry in any climate, ensuring convenience on the go.

Unique Selling Proposition

fragrance + hygiene + sustainability for modern, active lifestyles

The first heat-activated, dissolvable patch

Controlled-release Micro Dispersion

No frequent reapplication like traditional colognes/deodorants

A single spray from a standard 50-100mL perfume bottle releases about 0.15mL of fragrance. For a noticeable but pleasant scent we need ~0.4 mL and traditional fragrance release about 0.6 mL (3-4 sprays) at once. Which diminishes gradually with time in an ideal environment.

Plumeo release 0.4 mL of scent each hour for 12 hours

PLUMEO

vs

REGULAR SCENTS

Traditional fragrances go under 0.4 mL in under 5 hours

STEP I Regional Expansion

- Begin with GCC and KSA, leveraging these regions' \$1 billion male grooming market
- Expand to tropical and humid regions like Southeast Asia, Africa, and Latin America, where odor control is needed consistently

Future Scalability

STEP III Global E-Commerce

- Establish distribution on global e-commerce platforms and high-traffic offline locations like gyms, airports, and malls

STEP II Global Expansion

- Scale to global urban markets, tapping into the \$81 billion male grooming market by 2030.
- Focus on urban professionals and eco-conscious consumers who prioritize sustainable and innovative products
